SOURDOUGH

BAKING JOURNAL

From Starter to Perfect Loaf

Track Every Bake * Master the Craft

Hydration * Fermentation * Crumb

100 Bake Log Entries + Starter Tracker

/ | \

Deokgu Studio

Welcome to Your Sourdough Journey

This **Sourdough Baking Journal** is built for the bakers who know that great bread isn't luck — it's a record. Every loaf you bake is a small experiment: a mix of flour, hydration, time, and temperature. Write it down, and your starter will reward you.

What this journal helps you track:

Recipes & Hydration — Lock in flour blends and baker's percentages so you can repeat or refine.

Schedule & Timing — Levain, bulk, shape, proof, bake — the full timeline for every loaf.

Temperature — Room, dough, and oven — the variables that secretly control your crumb.

Crumb & Crust — Score the result while it's fresh in your mouth, not three weeks later.

Starter Maintenance — When you fed, how it rose, and how it smelled. The starter log section pays off fast.

Recipe Library — Save your winners in a clean format — the back section is your personal cookbook.

How to Use This Book

Fill in a **Bake Log** page for each loaf, ideally while the bread is cooling. Use the **Starter Maintenance Log** to spot when your starter peaks. Move repeatable winners into the **Recipe Library** at the back. After ten loaves, patterns emerge. After fifty, you'll bake on instinct.

Happy baking — may your scoring be sharp and your crumb be open.

Goal Loaf: _____

Quick Tips for Better Loaves

* Feed your starter at the same time each day to build predictable peaks.

* Cooler dough = slower fermentation = better flavor; warmer dough = faster, milder.

* Use the float test: a teaspoon of starter that floats in water is ready to bake with.

* Bulk fermentation ends when dough is jiggly, domed, and 50-75% larger — not by the clock.

* Score at a low angle with a sharp blade for a dramatic ear.

* A preheated dutch oven traps steam — that's where shiny crust comes from.

* If your crumb is gummy, the bake was too short. Push the internal temp to 205-210 F.

* Keep an under-fed starter in the fridge for weekly bakes; revive 12 hours before mixing.

Baker's Percentage Cheat Sheet

Every ingredient is scaled relative to total flour weight (= 100%). This is how you scale a recipe up or down without losing your hydration.

LOAF STYLE	HYDRATION	STARTER	SALT	BULK
Beginner Country	70%	20%	2%	4-5 hr
Classic Sourdough	75%	20%	2%	4-6 hr
Open-Crumb Artisan	80%	15%	2%	5-7 hr
High-Hydration	85%	15%	2%	5-8 hr
Whole Wheat	80%	20%	2.2%	4-5 hr
Rye Blend	78%	20%	2%	3-4 hr
Focaccia	80%	20%	2%	4-5 hr
Sandwich Loaf	65%	15%	2%	4-6 hr
Baguette Style	70%	10%	2%	3-4 hr
Pizza Dough (cold)	65%	10%	2.5%	1 hr + cold

Hydration only counts water added; flour in the starter counts toward total flour. Starter %% is starter weight divided by total flour weight.

Closing Notes

"Bread, in all its forms, is the most successful food invention ever. Sourdough is the original."

Thank you for using this Sourdough Baking Journal. Trust your starter, trust the process, and don't be afraid to push the hydration. The next loaf is always your best teacher.
