How To Use This Tracker

Migraine and headache patterns can take months to surface. Tracking them daily for 13 weeks gives you real evidence of what triggers attacks, what medication actually works, and which lifestyle factors matter.

1. Each evening, fill in one DAILY page. Even on pain-free days, log sleep, stress, and any triggers you noticed.
2. If you had an attack, rate pain 0 (none) - 10 (worst possible). Note location, type, duration, and what relieved it.
3. At the end of each week, complete the WEEKLY REVIEW. Count attack days, average pain, and rescue meds used.
4. Once a month, fill in the NEUROLOGIST VISIT PREP page before your appointment. Bring this book.
5. Watch for MOH (medication-overuse headache): if you take acute meds more than 2 days per week, flag it for your doctor.

This is a personal journal, not medical advice. Always discuss symptoms and treatment with a qualified healthcare provider.

Common Migraine & Headache Triggers

Thirteen Weeks of Real Data

You now have a record most patients never bring to their neurologist.

Look back through the pages. Which triggers showed up most often? Which weeks were worst, and what came before them? What pattern is your body trying to tell you?

Bring this book to your next appointment. The conversation will be different — because for the first time, you have evidence.
